

ComEd's Net Metering Program

The ComEd Net Metering program is available to residential or commercial customers who own or operate an on-site eligible renewable electric generator of up to 2,000 kW that generates electricity **for the customer's own use**. Eligible renewable electric generators include those powered by solar electric energy (e.g. photovoltaic), wind, dedicated crops grown for electricity generation, anaerobic digestion of livestock or food processing waste, fuel cells or microturbines powered by renewable fuels, or hydroelectric energy.

Net Metering will provide a customer credit for the excess generated energy that flows onto the distribution system according to the terms of ComEd's Net Metering tariff, Rider POGNM – Parallel Operation of Retail Customer Generating Facilities with Net Metering. For Rider POGNM eligibility requirements and details please see www.comed.com.

Net Metering Program Requirements

1. The proper interconnection application form and application fee must be submitted to ComEd to initiate the interconnection process for the eligible renewable electricity generating facility (Facility) to the ComEd grid – either a Level 1 or a Level 2, Level 3, Level 4 interconnection form.
 - Wind and solar electric (photovoltaic) generator systems less than 10 kilowatts (kW) that use an inverter can apply for Level 1 expedited interconnection review process, which takes approximately 3 weeks after a complete form is received.
 - Larger generator systems, or non-inverter based systems, may also qualify for an expedited interconnection review process under Level 2 or Level 3.

For more information and to download forms, see the ComEd website: www.comed.com. Use the menu to select “Customer Service”, “Rates”, “Interconnection”. Interconnection application forms and information can be found in the “Distribution” section.

Operation of the Facility and service under the provisions of Rider POGNM is not allowed until such time the Facility has been approved for interconnection by ComEd, a Certificate of Completion from ComEd has been issued authorizing such interconnection and all prerequisites of service, as stated in Rider POGNM, have been met.

2. A Net Metering Application Form must be submitted to ComEd to enroll in the Net Metering Program. The attached Application form on page 2 of this document must be completed and mailed or faxed to ComEd at the address or fax number noted at the bottom of page 2. Upon approval, you will be asked to sign and a Net Metering Agreement to participate in Net Metering. ComEd will place your electric service account under Rider POGNM. This includes the determination and installation of the appropriate type of electric meter.

If ComEd is not your electricity supplier, you must contact your electricity supplier directly for details about your electricity supplier's net metering program, and to get an enrollment form. Your electricity supplier will work directly with ComEd.

NET METERING APPLICATION FORM

Date: _____

Section 1. Net Metering Applicant's Contact Information:

Name: _____

Mailing Address: _____

City: _____ State: _____ Zip Code: _____

Telephone Number: _____

Facsimile Number: _____

E-Mail Address: _____

Section 2. Location of Net Metering Installation:

Electric Account Number of Facility site (existing customers): _____

If address same as above check here:

Address: _____

City: _____ State: _____ Zip Code: _____

Section 3. Description of the Net Metering Facility:

Total Nameplate Capacity of the Eligible Net Metering Facility (kW): _____

Type of Facility:

Prime Mover: Photovoltaic: Reciprocating Engine: Turbine: Fuel Cell: Fuel Type: Solar: Wind: Hydro: Dedicated Crops Grown for Electricity Generation: Methane from Anaerobic Digestion of Livestock Waste: Methane from Anaerobic Digestion of Food Processing Waste: **Mail this Application to:**Commonwealth Edison Company
Energy Efficiency Services - Net Metering
Three Lincoln Center, 2nd Floor
Oakbrook Terrace, IL 60181-4260**Or:**

Fax to: (630) 576-6353

Instructions for Completing Section 3

Total Nameplate Capacity of the Eligible Net Metering Facility (kW)

Photovoltaic systems: The nameplate capacity is the smaller of:

- a. The photovoltaic module wattage multiplied by the number of modules in the system, divided by 1,000 watts/kilowatt

Or:

- b. The AC power rating of the inverter in watts, divided by 1,000 watts/kilowatt

Wind turbine systems, Reciprocating engines, Fuel cells:

The rated power in watts divided by 1,000 watts/kilowatt

Type of Facility

Prime Mover: The type of system that will produce the electric power. The term “generator” is used to generically describe a system that produces electric power.

Fuel Type: The energy source for the generator.

NOTE: Please complete a separate Net Metering Application Form for each facility type installed.

Terms of This Application

This Application must be completed in its entirety to be considered for Net Metering service from ComEd under the provisions of Rider POGNM – Parallel Operation of Retail Customer Generating Facilities with Net Metering (Rider POGNM).

Any changes or modification of the generating equipment, such as an addition of generating capacity to the Facility, addition of photovoltaic modules to the existing array, or replacement of generating equipment, will require the submission of a new Net Metering Application Form.

Applicant must also submit an Interconnection Application form to ComEd. Operation of an Eligible Net Metering Facility and service under the provisions of Rider POGNM is not allowed until such time the Facility has been approved for interconnection by ComEd, a Certificate of Completion from ComEd has been issued authorizing such interconnection and all prerequisites of service, as stated in Rider POGNM, have been met.
